

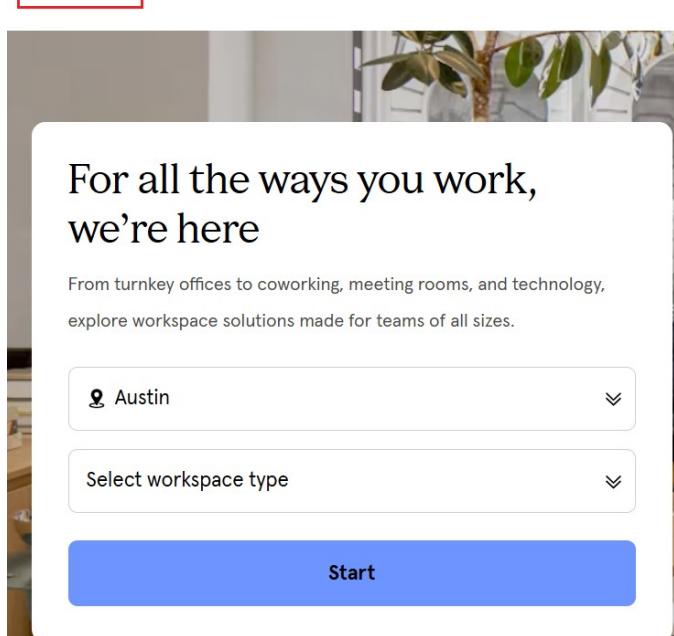

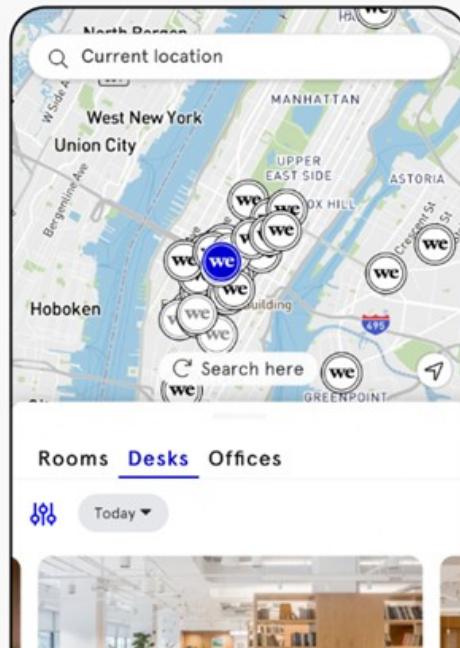

Exhibit 2

Charted Claim:

Method Claim: 1

CLAIM 1 (US9455987B2)	WeWork ("Accused Product")
1. A method of geo-verification for access to data stored in a memory of a server having a processor and a network interface connected to the memory, the method comprising:	<p><i>WeWork uses GPS-based checks (geo-verification) to access a WeWork co-working location. It utilizes GPS check and user authentication to access confirmation data & booking details stored in a server memory of the WeWork. WeWork server must be having processor, memory and network interface.</i></p> <p>A screenshot of the WeWork website. At the top, there is a navigation bar with the 'wework' logo (highlighted with a red box), 'Locations', 'Solutions', and 'Enterprise' buttons. Below the navigation is a large image of an office interior with a potted plant. Overlaid on this image is a white search interface. The top part of the interface has a dropdown menu set to 'Austin'. Below it is another dropdown menu labeled 'Select workspace type'. At the bottom is a large blue 'Start' button. The text 'For all the ways you work, we're here' and 'From turnkey offices to coworking, meeting rooms, and technology, explore workspace solutions made for teams of all sizes.' is visible above the search interface.</p> <p>Link: https://www.wework.com/</p>

Can I make a booking at multiple locations on the same day?

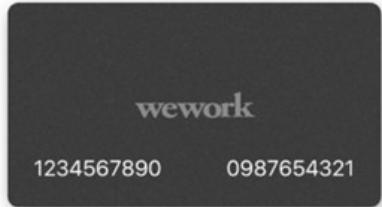

WeWork All Access monthly memberships (i.e., All Access Basic, Plus and Dynamic) include one (1) workspace booking per day. Additional workspace bookings for the same day may only be reserved at other available WeWork locations, and you will be charged one (1) credit per additional workspace booking. WeWork All Access Pay Per Use is a usage-based membership and multiple bookings can be made in a single day, with each workspace booking charged at two (2) credits. You can also make multiple types of bookings on the same day, with each booking charged individually.

Unburdening WeWork members from having to carry (sometimes multiple) physical cards to gain access to spaces and amenities gave reason to start looking into creating door-hardware agnostic solutions. Starting with a simple v1 using bluetooth and location services, the mobile keycard feature is currently rolling through beta testing phases and on its way to a wider general release. Concurrently, I'm leading a team who is exploring deeper integration capabilities with native devices, and the offerings it can bring.

a) receiving a selection of an approved location from the client computing device;	<p><i>Wework allows a user to select a location for coworking work space. It allows the user to book a desk location or private office location.</i></p>

The image is a screenshot of the WeWork website's homepage. At the top, the "wework" logo is displayed in a red box. To the right of the logo are three navigation links: "Locations", "Solutions", and "Enterprise". Below the navigation, there is a large, semi-transparent image of an office interior featuring a large potted plant. Overlaid on this image is a white rectangular search interface. The interface contains the text "For all the ways you work, we're here" in bold. Below this, a subtext reads: "From turnkey offices to coworking, meeting rooms, and technology, explore workspace solutions made for teams of all sizes." The search interface includes a dropdown menu for "Austin" and another for "Select workspace type", both with downward arrows. At the bottom of the interface is a large blue button with the word "Start" in white. At the very bottom of the screenshot, there is a link text "Link: <https://www.wework.com/>".

Unburdening WeWork members from having to carry (sometimes multiple) physical cards to gain access to spaces and amenities gave reason to start looking into creating door-hardware agnostic solutions. Starting with a simple v1 using bluetooth and location services, the mobile keycard feature is currently rolling through beta testing phases and on its way to a wider general release. Concurrently, I'm leading a team who is exploring deeper integration capabilities with native devices, and the offerings it can bring.
